  - Storage Rack and Mezzanines
- 

As one of the premier integrators in the United States, Malin has the comprehensive and proven resources to help you solve your business and supply chain needs. Our goal is to earn valued customer partnerships by providing superior, cost-effective material handling solutions that create customer competitive advantages.

Whether you need to design a system from the ground up or re-engineer your existing system, our dedicated Malin Systems division performs comprehensive data analysis, design engineering, equipment sales and installation, and post implementation services.

Our solutions include operational flow analysis and distribution center and warehouse systems engineering. This includes planning, design, installation, project management and user training for all types of product distribution and warehouse industries.

## Engineered Services

Malin's in-house engineering team utilizes state-of-the-art technology to provide comprehensive engineering services that ensure accurate designs, installation and the flexibility to expedite fast-track projects. Partner with Malin and you partner with a company that has the proven ability to design the most cost-effective solutions to store, pick, move and ship products.

## Conveyor and Sortation Systems

Conveyor and sortation systems may be part of the equation for your overall supply chain success. Designed with productivity in mind, our systems can contribute substantially to your corporate bottom line. The efficiencies gained in inventory management, storage and product movement generate a measurable and profitable distribution solution. Whether you need to transport product between two different locations or different elevations, divert product from one conveyor line to another or hold product until a specific condition is satisfied, Malin solutions prove profitable.

## Picking, Packing and Shipping

In today's fast paced and labor intensive distribution climates, Malin has the perfect solutions for streamlining your order picking, packaging and shipping operations. Using the combination of mechanization, controls and software systems we enable our customers to:

- Reduce labor costs by up to fifty percent (50%)
- Improve inventory accuracy
- Exponentially improve productivity

## WCS / WES Software

No matter what type or size facility you operate, Malin enables you to manage the movement and storage of all your materials, and achieve real-time control of inventory, labor, and equipment. Our expertise is integrating accounting/order and shipping software systems, electronic data interchange systems, Crystal Reports software, radio frequency and barcode hardware, and warehouse automation equipment. Through a variety of interfaces, Malin software solutions integrate with various accounting/financial systems. Whether you warehouse product and distribute to a single location, or supply products around the globe, Malin offers a variety of software solutions to best complement your business requirements.

## Storage Rack and Mezzanines

Getting the most out of your space requires utilizing multiple storage solutions components.

- **Racks:** Rack and rack systems may be one of the answers to designing the most cost-effective solution to help store, pick, move and ship products.
- **Mezzanines:** Expand useable floor space, improve workflow and provide your employees the space required to reach maximum efficiency when you install quality mezzanines.
- **Static & Mobile Shelving:** Malin provides its customers with a range of static and mobile shelving solutions, including: industrial steel, bulk storage, archive records and mobile base.
